

# EAR CLEANING

A dog's ears should be cleaned once a week this should be part of the grooming routine, with the use of a good ear cleanser which you can mix yourself **25 % Glycerine and 75% alcohol** mixed in a small Eye-dropper bottle, available from your chemist or Pharmacy. When cleaning your dogs ears drop about 20 drops into your dogs ear then massage the bottom of the ears for about 30 seconds. After that, allow your puppy to shake it out from his ears. Gently wipe off the remaining solution and residual wax from the ear canal with a cotton ball. Take care not to poke anything into the puppy's / dogs ear. Only use Q-tips to clean the very outside of the ears if necessary.

This cleaner can also be dropped into your dogs ear just before you give him or her a bath so that if a little bit of water gets into the ears the alcohol in the drops will dry the water up and the Glycerine will soothe it .

75% surgical spirit / alcohol

25% Glycerine
